Source: U.S. Census Bureau, Small Area Health Estimates, 2009 & 2016

Note: Percent drop indicates the magnitude of uninsured rates from 2009 to 2016 for each county. The percent drop was calculated by subtracting the 2016 uninsured rate from the 2009 uninsured rate, and then dividing the difference by the 2009 uninsured rate.

The Small Area Health Insurance Estimates (SAHIE) were created to develop model-based estimates of health insurance coverage for counties and states. SAHIE is the only source of single-year estimates of health insurance coverage for counties in the US. SAHIE uses information from the Community Survey (ACS), demographic population data, aggregated federal tax returns, records for the Nutrition Assistance Program (SNAP), County Block-level Medicaid, Children's Health Insurance Program (CHIP) and decennial Census to calculate estimates.
