2020 COUNTY HEALTH RANKINGS:

What's new?

September 22, 2020

D. Charles Hunt, M.P.H.

GUESS WHO?

HORACE MANN (1796 – 1859)

“

*When will society, like a mother,
take care of all her children?*

-H. Mann, Journal (1837)

SIX EDUCATION PRINCIPLES OF HORACE MANN

1. Citizens cannot maintain both ignorance and freedom;
2. This education should be paid for, controlled and maintained by the public;
3. This education should be provided in schools that embrace children from varying backgrounds;
4. This education must be nonsectarian;
5. This education must be taught using tenets of a free society; and
6. This education must be provided by well-trained, professional teachers.

KANSAS HEALTH INSTITUTE

Informing Policy. Improving Health.

	2016	2017	2018	2019	2020	Kansas 2020
Number of Counties Ranked	101	102	103	102	104	104
Health Outcomes- Rank	8	7	23	17	15	n/a
Length of life- Rank	5	3	6	3	4	n/a
Premature death (years of potential life lost, per 100,000)	4872	5134	5354	5420	5371	7024
Quality of life- Rank	38	28	68	74	62	n/a
% Reporting poor or fair health, adults	12	12	13	13	15	16
Avg # poor physical health days, adults	3	3	3.4	3.4	3.4	3.6
Avg # poor mental health days, adults	3.1	3.2	3.6	3.6	3.9	3.7
% Low birthweight, <2,500 grams	6.3	6.5	6.5	6.8	7.2	7.1
Health Factors- Rank	11	17	22	19	32	n/a
Health Behaviors- Rank	9	9	12	21	60	n/a
% Adult smokers	17	15	15	15	17	17
% Obese adults age 20 and older	23	24	26	28	28	33
Food environment index, 0 (worst) to 10 (best)	6.9	7	7.3	7.3	7.3	6.8
% Physically inactive adults age 20 and older	19	18	18	17	17	25

The annual *County Health Rankings* provide a snapshot of the health of Kansas counties. The *Rankings* are made up of two summary scores: **Health Factors** (which measure issues that can shape the health outcomes) and **Health Outcomes** (which measure length and quality of life). The following tables illustrate the “drivers,” or measures with the greatest impact on ranking position, for this county.

What do these drivers mean? The drivers indicate the five measures that, when combined with the weighting, have the greatest impact on the ranking positions for health factors and health outcomes. Drivers labeled with a green plus sign are the weighted measures that influenced higher, or better, rankings. Drivers labeled with a red minus sign indicate priority areas which, if improved, could have the greatest impact on improving the rankings of the county.

Health Factors: Drivers with greatest impact on ranking, Douglas County, KS – 2020

	Measure	Description	Factor Category	County Value	State Value	Impact on Ranking
1	Excessive drinking	% of adults reporting binge or heavy drinking	Health Behaviors	24%	19%	–
2	Some college	% of adults age 25-44 with some post-secondary education	Social and Economic Environment	84%	70%	+
3	Children in poverty	% of children under age 18 in poverty	Social and Economic Environment	12%	15%	+
4	Adult obesity	% of adults age 20 and older that report a BMI ≥ 30	Health Behaviors	28%	33%	+
5	Sexually transmitted infections	# of newly diagnosed chlamydia cases per 100,000 population	Health Behaviors	725	465	–

Health Outcomes: Drivers with greatest impact on ranking, Douglas County, KS – 2020

	Measure	Description	Outcome Category	County Value	State Value	Impact on Ranking
1	Premature death	Years of potential life lost before age 75 per 100,000 population	Length of Life	5371	7024	+
2	Poor mental health days	Average # of mentally unhealthy days reported in past 30 days for adults	Quality of Life	3.9	3.7	–
3	Low birthweight	% of live births with low birthweight (< 2,500 grams)	Quality of Life	7.2%	7.1%	–

NEW FEATURES

COVID-19: Response and Recovery Work

The coronavirus epidemic has widened existing social, geographic, and economic inequities in communities across the country.

While the County Health Rankings do not measure coronavirus cases nor rank risk of the virus spreading in communities, Rankings data are helpful in providing local context on factors that impact health.

Gaps in health persist by place and race. These gaps are due to a long legacy of American policies, practices, systems, and budgets that advantage some people and disadvantage others. Rankings factors such as housing, access to medical care, and unemployment provide a better understanding of community context and the places and people that could be most affected by the coronavirus epidemic.

The Rankings are a call to action about what can be done to improve community conditions so that an inclusive and equitable recovery for all is possible.

Find out more information below on the Rankings' work related to response and recovery from the COVID-19 pandemic, including a county-level data mapping project in collaboration with the University of Chicago, a special webinar series, featured COVID-19-curated What Works for Health strategies, and community stories.

US COVID Atlas: Partnership with the University of Chicago Center for Spatial Data Science

The University of Chicago Center for Spatial Data Science's US COVID Atlas tracks near real-time coronavirus data to provide a unique county-level look at how

Education

Better educated individuals live longer, healthier lives than those with less education, and their children are more likely to thrive. This is true even when factors like income are taken into account.

About

Measures

Strategies

Explore the Data

When it comes to developing and implementing solutions to problems that affect communities, evidence matters. The strategies below give some ideas of ways communities can harness evidence to make a difference locally. You can learn more about these and other strategies in [What Works for Health](#), which summarizes and rates evidence for policies, programs, and systems changes.

[Alternative high schools for at-risk students](#)

Provide educational and social services in an alternative setting for students at-risk of dropping out of traditional high schools [Learn more >](#)

[Attendance interventions for chronically absent students](#)

Support interventions that provide chronically absent students with resources to improve self-esteem, social skills, etc. and address familial and school-related factors that can contribute to poor attendance [Learn more >](#)

[Career & technical education for high school graduation](#)

Provide career and technical education (CTE) as an integrated part of an academic curriculum for students at risk of dropping out of high school; also called vocational training [Learn more >](#)

[Career Academies](#)

Establish small learning communities in high schools focused on fields such as health care, finance, technology, communications, or public service [Learn more >](#)

Evidence Rating ¹

Alternative high schools for at-risk students

🖨️ Print this strategy

☆ Save this strategy

Alternative high schools provide educational opportunities for students whose needs are not met by a traditional school model, often, students who have quit, been expelled, or are at increased risk of dropping out. Alternative schools generally offer services such as childcare or support groups, have a flexible structure, supportive environments, and small classes, and emphasize interactions between teachers and students. Such schools are frequently established in low income communities and housed outside of traditional schools. Alternative high schools are distinct from community-based alternative education programs for at-risk students that supplement traditional high school learning ([CG-TFR Education](#)).

Expected Beneficial Outcomes (Rated)

- Increased high school graduation

Evidence of Effectiveness

There is strong evidence that alternative high schools for at-risk students improve high school graduation rates ([CG-TFR Education](#), [Campbell-Wilson 2011](#)). On average, alternative schools increase graduation rates among students at risk of dropping out by 15.5% ([CG-TFR Education](#)).

Interviews with at-risk students suggest that students are more likely to stay in alternative high schools that provide safe spaces physically, emotionally, and psychologically; foster a sense of community; affirm students' racial/ethnic identities; and use flexible disciplinary systems based on discussion and conflict resolution ([O'Gorman 2016](#)).

Implementation challenges such as staffing or funding difficulties, problems with the physical space, and low program attendance or completion rates can reduce the effectiveness of alternative high schools ([Campbell-Wilson 2011](#)).

The cost of alternative schools varies significantly, ranging from \$1,700 to \$12,900 per student. The estimated benefit to cost ratio for alternative schools ranges from 0.6 to 1 to 1.6 to 1 ([CG-TFR Education](#)).

Impact on Disparities

Likely to decrease disparities

Implementation Examples

Alternative education programs have been formally defined in 43 states; definitions vary, but usually include guidelines about services, for example, regular academic instruction (21 states), counseling (14 states), social and life skills training (13 states), vocational and workplace preparation (12 states), or behavioral services (e.g., anger management or conflict resolution) (11 states) ([IES-Porowski 2014](#)).

2020 County Health Rankings State Report - Interactive Diagram

Patterns of unfair and avoidable differences in a variety of health measures exist at the local, state, and national level. The graphic below allows you to explore how health may vary for counties and among racial/ethnic groups within your state.

Please see more notes at the bottom of this page.

Choose a state

Kansas

Choose a measure

Children in poverty

Optional: Interested in digging deeper?
Uncheck all the boxes below, and then follow the guided questions as you add data back to the figure.

State-level data and overall national value

State's county-level data

US county-level data

Only check the box for state-level data and overall national data and ask:

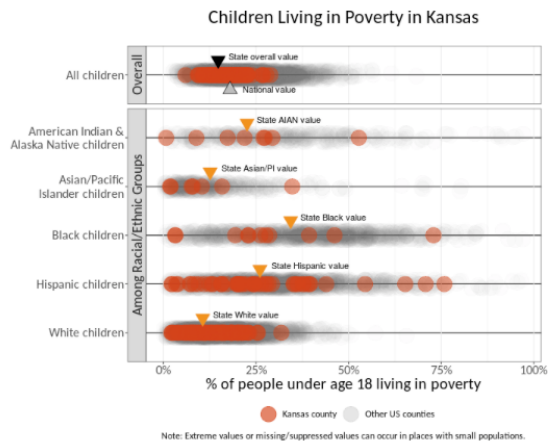

How does your state compare to the nation?
How do the patterns differ by race or ethnicity?

Add your state's county-level data and ask:

How big is the range among counties, overall?
How do the patterns differ by race or ethnicity?
How do the county values compare to the state values?

Add US county-level data and view by itself or in addition to your state's data and ask:

What is the pattern in other US counties?
