

Topic	Origin	CurrentRecLang	ImplementationScore	ImpactScore	CombinedScore
Data Systems	New	State Hospital EHR: The new state hospital electronic health record (EHR) system should be interoperable with other data systems in the state. Interoperability should include the ability to automate the current process to reinstate Medicaid benefits following discharge.	9	9	18
Data Systems	SUDTF	Prev5 and Prev 6. Data and Survey Opt-Out. Collect, analyze, use, and disseminate surveillance data to inform prevention. Change legislation regarding public health and behavioral health state surveys (KCTC and YRBSS from an opt-in consent, to an informed opt-out consent to allow for meaningful data collection).	8	9	17
Data Systems	CWSTF & CYWG	Tier Two Recommendation: Information Sharing. The State of Kansas should establish a multidisciplinary approach and share information across and among stakeholders, irrespective of state borders, in accordance with federal and state laws. Potential future topics to study regarding demographic characteristics were to include primary language and geographic distribution amongst crossover youth across Kansas.	8	9	17
Data Systems	GBHSPC	PS Recommendations. Encourage state agencies to develop policies that improve their ability to access and review cross-agency data for making service and program decisions based on a thorough, shared needs assessment.	6	8	14
Data Systems	SUDTF	TR4. Needs Assessment. Conduct a statewide needs assessment to identify gaps in funding, access to SUD treatment providers and identify specific policies to effectively utilize and integrate existing SUD treatment resources	7	7	14
Data Systems	CYWG	Child Welfare Placements: The working group proposes future efforts to study strategies for engaging relatives to care for crossover youth, collecting data on outcomes for youth placed in group residential homes, and understanding whether youth who might have been detained prior to SB 367 are now being placed in the child welfare system.
