Navigating AI: Exploring Opportunities, Challenges and Policy Development

Panel & Presentation

A thoughtful, multipronged approach—including well-designed policies—is needed to ensure responsible and effective AI use and mitigate potential drawbacks. On March 6, KHI hosted a panel discussion that featured experts who explored the opportunities and challenges of AI in public health, disaster preparedness and related fields. This guide includes key resources from the event, discussion questions for deeper reflection and ways to stay connected as we continue to explore AI policy development.

Resources

Explore *Developing Artificial Intelligence (AI) Policies for Public Health Organizations: A Template and Guidance* to create responsible AI policies!

[ACCESS THE AI TEMPLATE >](#)

Discover how to apply the AI Policy Template and Guidance in this expert-led webinar on key provisions and real-world applications.

Discussion Questions

- How do you see AI being used in your organization, and what potential benefits do you anticipate?
- What are some challenges or risks that come to mind when thinking about AI implementation in your work?
- What are the most important factors your organization should consider when deciding whether to use AI?
- If your organization was to adopt AI, what topics should be included in your policies or guidelines to ensure ethical use?
- Who in your organization would need to be involved in developing an AI policy, and what role would they play?
- What additional support or resources would help your organization feel more confident in how you might use AI responsibly?
